

Nazar Lenyk

7+ years · KMP · Flutter · AI tooling

Senior/Lead Android Engineer, 7+ years shipping production mobile apps across last-mile delivery, fintech, social, utilities, and IoT. Currently Tech Lead at VanOnGo — leading a KMP + Compose Multiplatform migration (~70% UI / ~80% logic shared). Remote-first, based in Ukraine. Also: Flutter, AI tooling. Open to Senior/Lead Android roles — product companies, KMP/CMP, remote.

WORK EXPERIENCE

VanOnGo Company

Tech Lead, Mobile | March 2023 - Present

Driver app for a last-mile delivery platform.

- Mentor and collaborate with 2 KMP engineers, making technical decisions and driving mobile architecture across the team.
- Migrating a production Android app to KMP + Compose Multiplatform: ~70% of UI and ~80% of business logic already shared across Android and iOS, with full coverage as the target.
- Refactored location tracking end-to-end — adopted GPS filtering best practices, added spoofed-location detection, and improved overall stability and battery efficiency.
- Built real-time ongoing notifications for delivery status updates, giving drivers live visibility without opening the app.
- **Stack:** Kotlin, Compose Multiplatform, Decompose, MVI, Swift, Coroutines, StateFlow.

Rumors Dating App

Flutter Developer (part-time) | February 2026 - Present

Concurrent part-time role building features for a production Flutter dating app.

- Shipped onboarding flow, profile update screens, and other user-facing features.
- Drove project-wide refactoring, introducing BLoC for state management alongside the existing MobX setup.
- **Stack:** Flutter, Dart, BLoC, MobX, Dio, GetIt, Firebase (Crashlytics, Messaging, Analytics), WebSockets.

EDUCATION

WUNU, Ukraine

B.A in Advanced Computer
Integrated Technologies

2016-2020

SKILLS

CORE: Android Jetpack, Android SDK, Gradle, Git, Jetpack Compose, Kotlin, Kotlin Coroutines, Unit/Integration/E2E tests, Compose UI tests

ANDROID: Camera 2, Dagger 2, FCM, Firebase Crashlytics, Firestore, Flow, Hilt, LiveData, MVI, MVVM, OkHttp, Retrofit 2, Room

KMP/CMP: Compose Multiplatform, Decompose, expect/actual patterns, Koin, Kotlin, Ktor, Ktorfit, Room, SQLite, Swift

FLUTTER: BLoC, custom UI widgets, Dart, Dio, Firebase, GetIt, MobX, state management

AI TOOLING: Claude Code, OpenCode — daily drivers for code gen, refactoring, debugging, architecture. Build custom agent skills and orchestrate multi-agent workflows.

DEVOPS: Bash, Docker, Fastlane, GitHub Actions, GitLab CI, Make

WORK EXPERIENCE

ALP.COM Company

Android Engineer | November 2022 - March 2023

Crypto exchange app — Android engineer until the project was paused.

- Fixed UI bugs and improved stability across multiple screens.
- **Stack:** Kotlin, Jetpack Compose, Flow.

Axles Company

Android Engineer | July 2020 - December 2022

Outsourced contractor working on 5 diverse Android projects across utilities, social networking, and media.

- Led 2 utility apps from scratch to release, both with whitelabel support.
- Fully migrated Java codebase to Kotlin on one project.
- Upgraded Camera 2 functionality for enhanced image capture capabilities.
- Integrated ExoPlayer with video filters for media app.
- **Stack:** Kotlin, Java, XML, Coroutines, LiveData, Flow, Room, Retrofit 2, Dagger2, Koin, Camera 2, ExoPlayer, MVVM, GitHub Actions, Firebase, Fastlane.

Trexoz Company

Mobile Engineer (solo) | October 2019 - July 2020

Built driver app from scratch as the sole Android developer.

- Developed the entire app solo — Google Maps integration with driver location and delivery points.
- Implemented WebSockets for real-time order updates and driver notifications.
- Designed dynamic UI adapting to different driver workflows and states.
- **Stack:** Kotlin, Coroutines, XML, LiveData, MVVM, Data Binding, Google Maps, WebSockets.

Infotechcentre Company

Trainee Engineer | January 2019 - November 2019

Built warehouse, document management, and IoT integration apps with hardware connectivity.

- Developed warehouse and document management apps with real-world workflows.
- Built ESP8266-based e-weight integration app, connecting Android to IoT hardware via Bluetooth/WiFi.
- Designed and implemented MySQL database backend for multi-app ecosystem.
- **Stack:** Kotlin, Java, Retrofit, Volley, MySQL, XML, Custom views, ESP8266, IoT.

PROJECTS

[ManualFlow](#) — Android test recorder: getevent + UiAutomator → Maestro flows.

[Gradik](#) — Dashboard for stuck Gradle and Kotlin daemons.

[heare](#) — Proactive ambient voice AI assistant: listens continuously (VAD), decides when to speak, acts via browser/bash/file tools.

[usbshka](#) — Android & iOS devices in the macOS menu bar: native, universal, idles at 0.02% CPU.
